

QxControl™

Modern Video Management & Access Control Software

QxControl™ is a modern video management and access control platform that enables commercial organizations to manage physical security from anywhere, on any browser-enabled device. Its cybersecure architecture and intuitive interface make monitoring, access management, and system administration simple and efficient.

QxControl™ Features

System Management

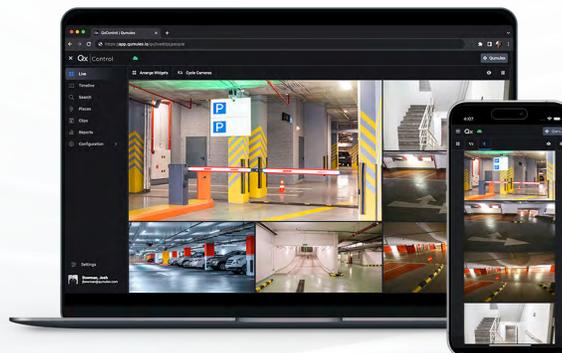

- Unified video and access control for simple, efficient setup and administration from a single interface — no complex system integrations required
- Modern, clean, and easy-to-use interface designed for everyday operators
- View cameras, control doors, and manage your system from anywhere on any browser-enabled device
- Native multi-tenant architecture simplifies management of multiple sites or customers
- Compatible with leading third-party cameras, door controllers, video analytics solutions, and more
- Progressive Web App technology ensures a consistent experience across desktop, tablet, and mobile devices
- Always up to date with no desktop or mobile applications to install or maintain
- Secure remote viewing with modern authentication and no port forwarding required
- Remotely access camera and controller web interfaces through a secure “Go to Webpage” feature, reducing support visits and maintenance costs
- Built-in rules engine provides automated notifications for video, access control, and system

Video Management

- View and record video from ONVIF-compliant cameras for broad device compatibility
- Quickly search and identify events using QxControl Smart Tags powered by camera-based video analytics
- Flexible recording controls, including configurable limits on upload bandwidth when storing video to external cloud locations
- Instantly share video clips via secure Link Share through email or text message, with included cloud clip storage

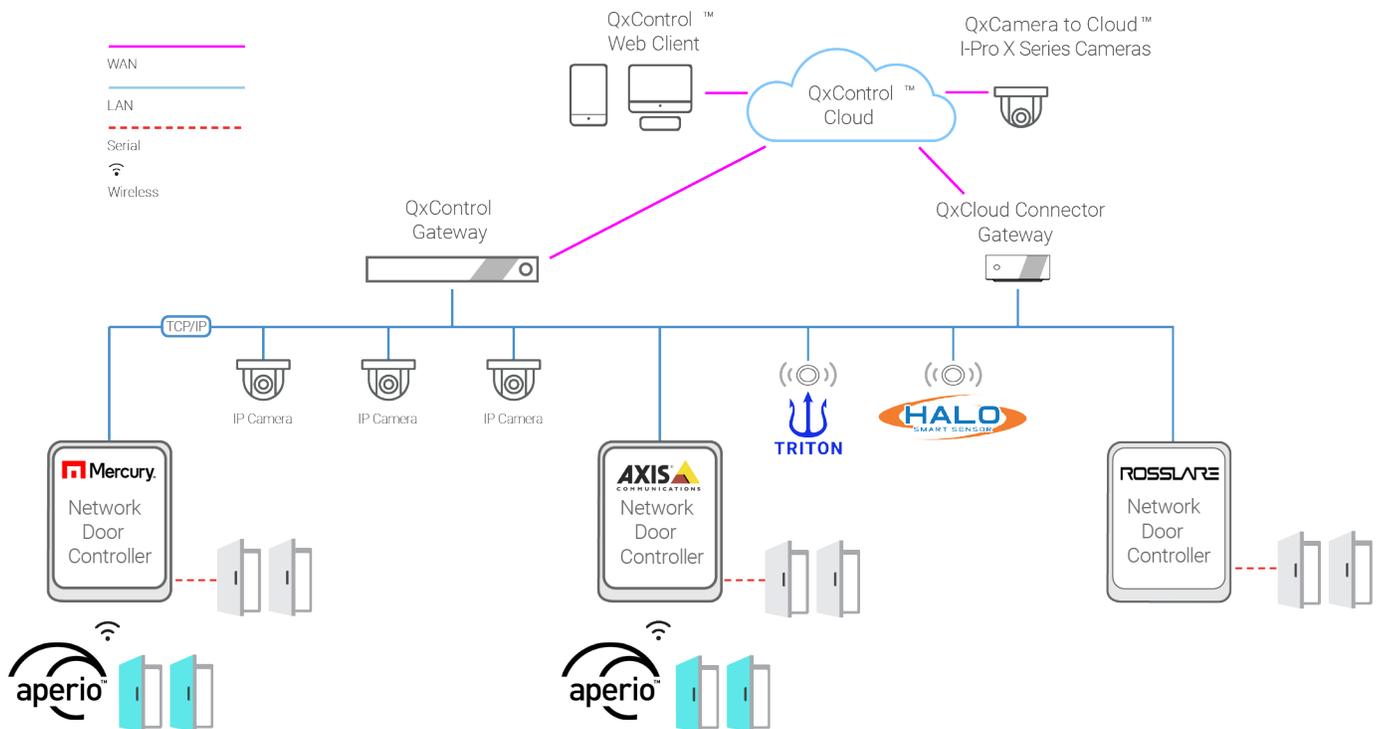

Access Control

- Configure door operating modes and schedules with centralized, streamlined management
- Remotely lock, unlock, or initiate lockdown of doors and facilities from any browser-enabled device, anywhere
- Monitor door status in real time for improved situational awareness
- Assign credentials to individuals and organize users into permission groups for simplified access management

KEY CAPABILITES
Unified video + access control in one simple platform
Open platform support including ONVIF-compliant devices
Access anywhere from any browser – no installs needed
Scales easily from single sites to multi-tenant deployments
Cybersecure remote access with no port forwarding
Smart alerts & automation for video, access, and system health
On-demand expansion for cameras, doors, analytics, and storage
Advanced video intelligence with on-demand access to leading edge-based analytics solutions
Flexible cloud storage with configurable bandwidth controls to optimize performance and cost
Instant video sharing via secure Link Share, including complimentary cloud clip storage
Automated alerts and smart rules keep you informed of security and system events in real time.
